MEMORANDUM FOR: Director, Central Reference Service

SUBJECT : Project SAFE

Dear Harry:

STATINTL

STATINTL

As you may be aware, representatives from several divisions of the Office of Logistics were briefed by [redacted] on 4 November 1974 on the SAFE project. Obviously, when this project is implemented, there will be a major logistics impact in both the facilities and procurement areas. Accordingly, I have designated Mr. [redacted] a mechanical engineer with our Real Estate and Construction Division, to be the Logistics focal point for this project. He will, of course, contact the appropriate elements of Logistics as required for all logistical support aspects of this project as it develops.

STATINTL

It is considered important that our Logistics representative participates in the project definition and design phase of Project SAFE in order to provide maximum lead-time for procurement or facilities construction activities. To this end, Hank has already been interfacing with [redacted] and other Project SAFE officers. If this arrangement is agreeable with you, I would propose to rely on a single focal point officer during this definition phase, although clearly Logistics will require participation by a larger staff when project implementation actually begins. Please advise if you concur in this nomination.

Signed: James H. H. Arnold
